

Pallet Protek™

Platen Protection Tape

Cut Clean-Up Costs By Pre-Covering Your Pallets

Cleaning up messy spray adhesive from your pallets is time-consuming and costly. It's also unnecessary. By pre-covering your pallets with R Tape's Pallet Protek™ and spraying the paper tape instead of the pallet, press clean up is simply a matter of removing and discarding the tape. The whole process is fast and easy.

R Tape has developed two paper pallet protection tapes #4300 Crepe Paper Pallet Protek™ and #4350 Smooth Paper Pallet Protek™. Generally, when registration of multiple colors is critical, printers choose the smooth paper tape. Printers, who have rubber-covered pallets, also prefer the smooth tape. Whether you use the smooth or the crepe paper tape is really a matter of personal preference. Printers are split 50/50. The best way to decide is to sample both products and use what suits your needs.

One way to save time and increase shop productivity is to apply several layers of the Protek™ tape to a pallet. When you need a clean sheet of pallet protection tape, just pull off the top layer. By marking the base layer with a large "X", a printer will be alerted that he needs reapply additional layers.

R Tape's #4300 Crepe Paper Pallet Protek™ and #4350 Smooth Paper Pallet Protek™ use a natural rubber adhesive that resists solvents & high temperatures of flash curing. The adhesive system is designed to remove easily and cleanly without adhesive residue.

For immediate service call R Tape at 800-440-1250. Additional technical information is available at our websites: www.rtape.com, www.coburn.com & www.plycarbonatefilms.com.
